

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A display device of an electronic apparatus for setting a plurality of conditions for a process of the electronic apparatus through an input operation while displaying the conditions before the electronic apparatus performs the process in accordance with the conditions, the device comprising:

determining means for determining whether or not each of the conditions has not yet been set; and

display control means for displaying notifying information indicating to what degree conditions remain to be set, wherein the notifying information is the number of conditions which have not yet been set, the number of conditions corresponding to input buttons for setting conditions, and wherein performance of the process is started when the number of conditions which have not yet been set reaches 0, the number being displayed by the display control means.

2-4. Canceled.

5. (Original) The display device of an electronic apparatus according to claim 1, wherein after items of the conditions are displayed, the notifying information is represented by switching a method of displaying each of the items of the conditions, depending on whether or not the item of the condition has already been set.

6. (Original) The display device of an electronic apparatus according to claim 5, wherein performance of the process is started when the display control means uses the displaying method to display that all the items of the conditions have already been set.

7. (Original) The display device of an electronic apparatus according to claim 5, wherein information for prompting an operation for starting performance of the process is provided when the display control means uses the displaying method to display that all the items of the conditions have already been set.

8. (Original) The display device of an electronic apparatus according to claim 1, wherein the conditions are set through an input operation to be either one of a default content and an arbitrary content.

9. (Original) The display device of an electronic apparatus according to claim 1, wherein a touch panel for inputting the conditions is provided on a display screen.

10. (Currently Amended) A display device of an electronic apparatus for setting a plurality of conditions for a process of the electronic apparatus through an input operation while displaying the conditions before the electronic apparatus performs the process in accordance with the conditions, the device comprising:

determining means for determining whether or not each of the conditions has not yet been set; and

display control means for displaying notifying information indicating to what degree conditions remain to be set, wherein the notifying information is the number of conditions that have not yet been set, the number of conditions corresponding to input buttons for setting conditions, and information for prompting an operation for starting performance of the process is provided when the number of conditions which have not yet been set reaches 0, the number being displayed by the display control means.

11. (Previously Presented) The display device of an electronic apparatus according to claim 10, wherein after items of the conditions are displayed, the notifying information is represented by switching a method of displaying each of the items of the conditions, depending on whether or not the item of the condition has already been set.

12. (Previously Presented) The display device of an electronic apparatus according to claim 11, wherein performance of the process is started when the display control means uses the displaying method to display that all the items of the conditions have already been set.

13. (Previously Presented) The display device of an electronic apparatus according to claim 11, wherein information for prompting an operation for starting performance of the process is provided when the display control means uses the displaying method to display that all the items of the conditions have already been set.

14. (Previously Presented) The display device of an electronic apparatus according to claim 10, wherein the conditions are set through an input operation to be either one of a default content and an arbitrary content.

15. (Previously Presented) The display device of an electronic apparatus according to claim 10, wherein a touch panel for inputting the conditions is provided on a display screen.
